

Software and Services for the Data and Analytics Program

City Public Healthcare System

OVERVIEW

The Healthcare System's Data and Analytics (DnA) Program required software to implement predictive analytics, as well as artificial intelligence (AI) and machine learning (ML) capabilities. Stellar and SAS were chosen as the solution to be implemented.

APPROACH

Stellar and our subcontractor SAS worked with the DnA Program staff to install and configure SAS Viya software.

SOLUTION

SAS software allows the client to perform additional analysis of historic data that were not enabled with the organization's prior software tools. This project also allowed the organization to increase automation and deploy a range of predictive analytics, and AI and ML capabilities

RESULTS

The installation has been completed, and Stellar and SAS are providing ongoing support.
